VITAL BACK SYSTEM FOOT CLIMATE TECHNOLOGY FITTING SYSTEM

SECURA VARIO® SYSTEM

EASING BACK STRAIN THROUGH
INDIVIDUAL HEEL DAMPING

Custom-tailored damping: The exchangeable, weight- and load-adjusted heel damping is adjusted to the individual requirements of the wearer. The excellent damping behaviour reduces the pressure load in the shoe to a natural level, relieves the back and significantly reduces fatigue.

VARIO MULTIFLEX®

ALMOST LIKE WALKING
BAREFOOT

Many safety shoes influence the natural movement of the foot and constrain its flexibility. The resulting leverage forces cause knee pain and back problems and can result in twisted ankles. That won't happen with us! Through intelligent adjustments to the shoe, we reduce undesired leverage forces: for example, by changing the geometry of the outer sole or reducing the sole thickness. One result of the VARIO Multiflex® technology is the multi-flexible sole.
